# Not only a Biological Microscope But a Stereoscopic Microscope

It breaks the single observation function of traditional microscope, introduces side light source and combines with optical path optimization, which allows users to observe not only biological loadings but also real entities like insects and pollen, etc

## Accurate measurement reading precise scale control

The instrument supports the display of polychromatic scale, cross curve and needle, with which users can not only read and locate the item but also save the set benchmarks for later analysis.

# Built-in 8G storage in the microscope

There is built-in 8G storage in the microscope. Users can transfer the experimental data into U disk by USB1 interface; after the U disk is inserted, the experimental data is stored in the U disk preferentially.

Users can connect desktop computers, laptops, electronic screens and other computer devices to output digital image by USB2 interface. Combined with special software, microscopic images can be analyzed and measured.

AT3116 supports the function of USB Camera

## Obvious & easy observe Replace complexity by simplicity

The machine comes with a 10.1-inch high-definition display to meet the needs of multiple people observing at the same time.

## Microscope in hand between coming and going

The eye-catching handle on the top of the instrument defines the holding district, which insures the microscope is upright when lifted, avoids the falling down of the eyepieces and the sample and effectively prevents the loss of accuracy
